Evaluation

Westchester County Department of Health's Community Health Electronic Surveillance System (CHESS) receives daily data electronically from existing healthcare information systems reported to the NYS Health Department, automatically analyzes data to detect potential elevated levels for syndromic categories of interest, and provides electronic reports to Health Department personnel. **Syndromes of interest are extracted and monitored by checking the patient chief complaints, triage notes, and diagnosis information.**

The substance use disorders (SUD) data reported in this brief include those cases with alcohol, nicotine, opioids, cannabis, sedatives, cocaine, stimulants, hallucinogens, inhalants, and other psychoactive substance documented in one or more diagnoses while visiting the ER system of the eleven acute hospitals in Westchester County. The specific factors of substance use disorder consist of abuse, intoxication, and physical/psychological dependence.

CHESS data are transmitted within 24 hours from the patients' admission to the ER without complete diagnosis coding by the facilities. Therefore, data reported in this brief may underestimate the extent of substance use in the county. However, it provides a timely description of current trends and raises awareness if there is an abnormal surge in incidence.

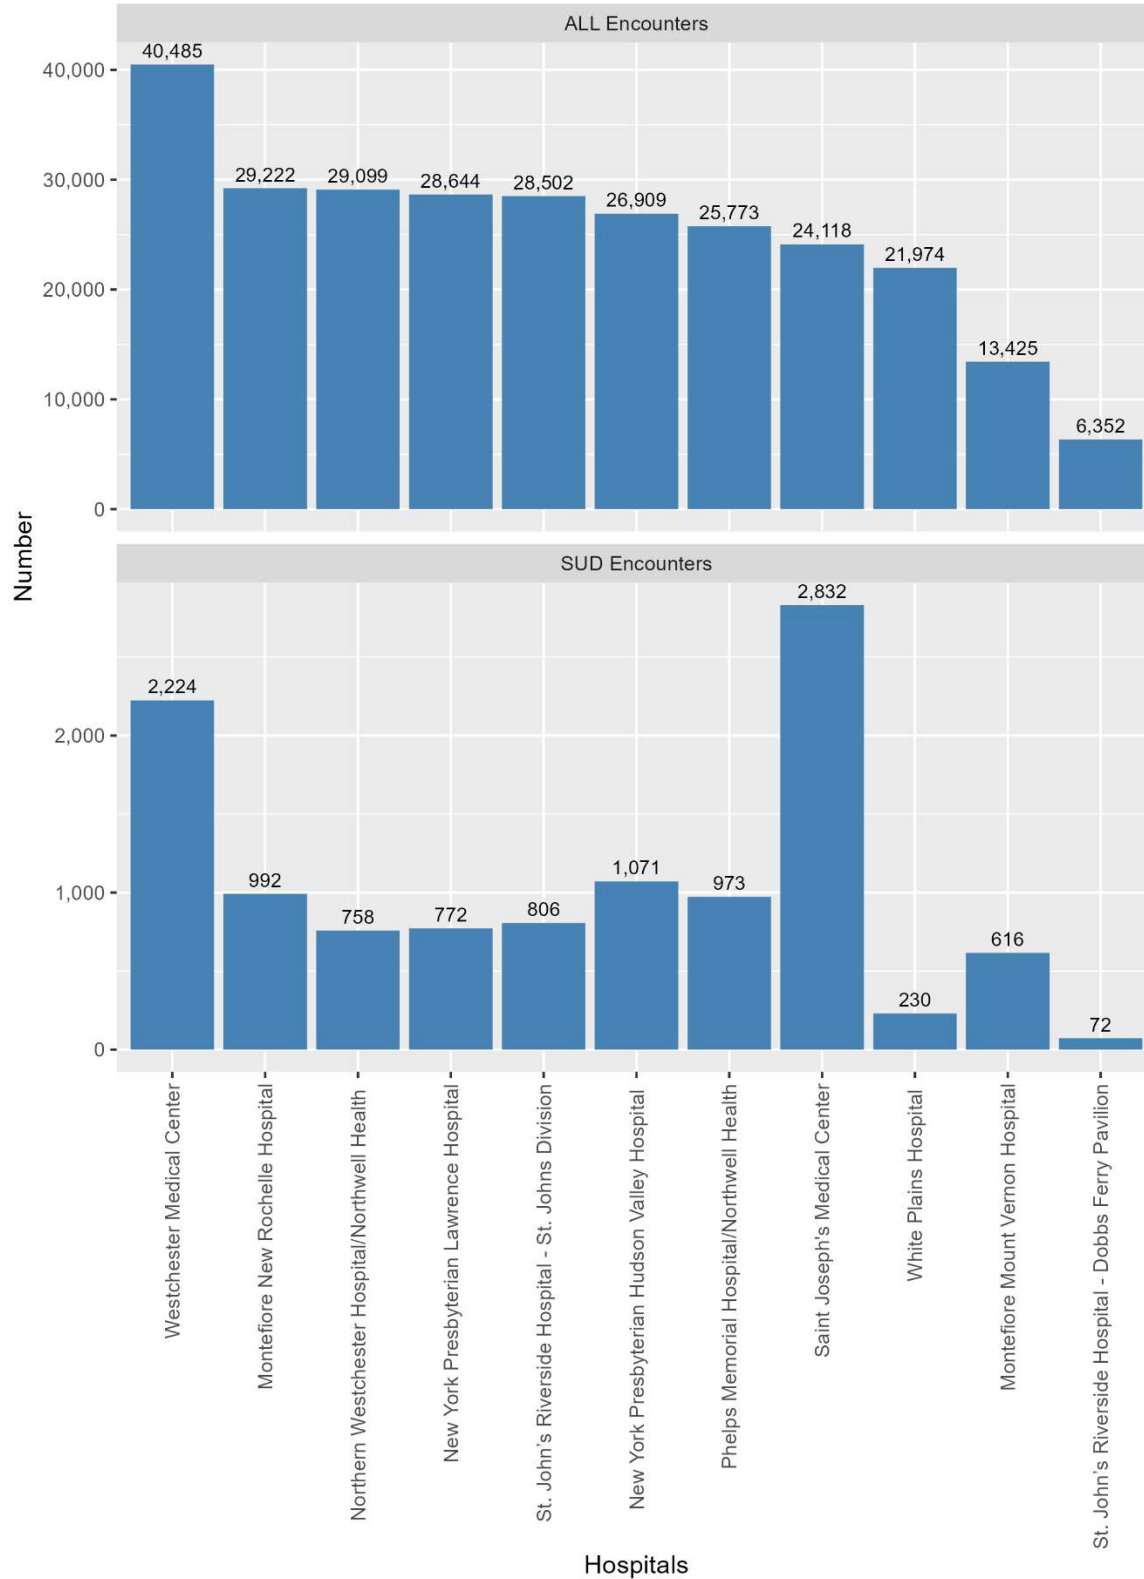

OVERVIEW

In 2023, Emergency Department of Westchester County hospitals have received 14,916 encounters with SUD documented in one or more of their diagnoses. Among them, 11,346 encounters have been registered as patients residing in Westchester County. Such encounters will be referred as SUD Encounters in this report. Rates of SUD encounters were calculated as per 100,000 population.

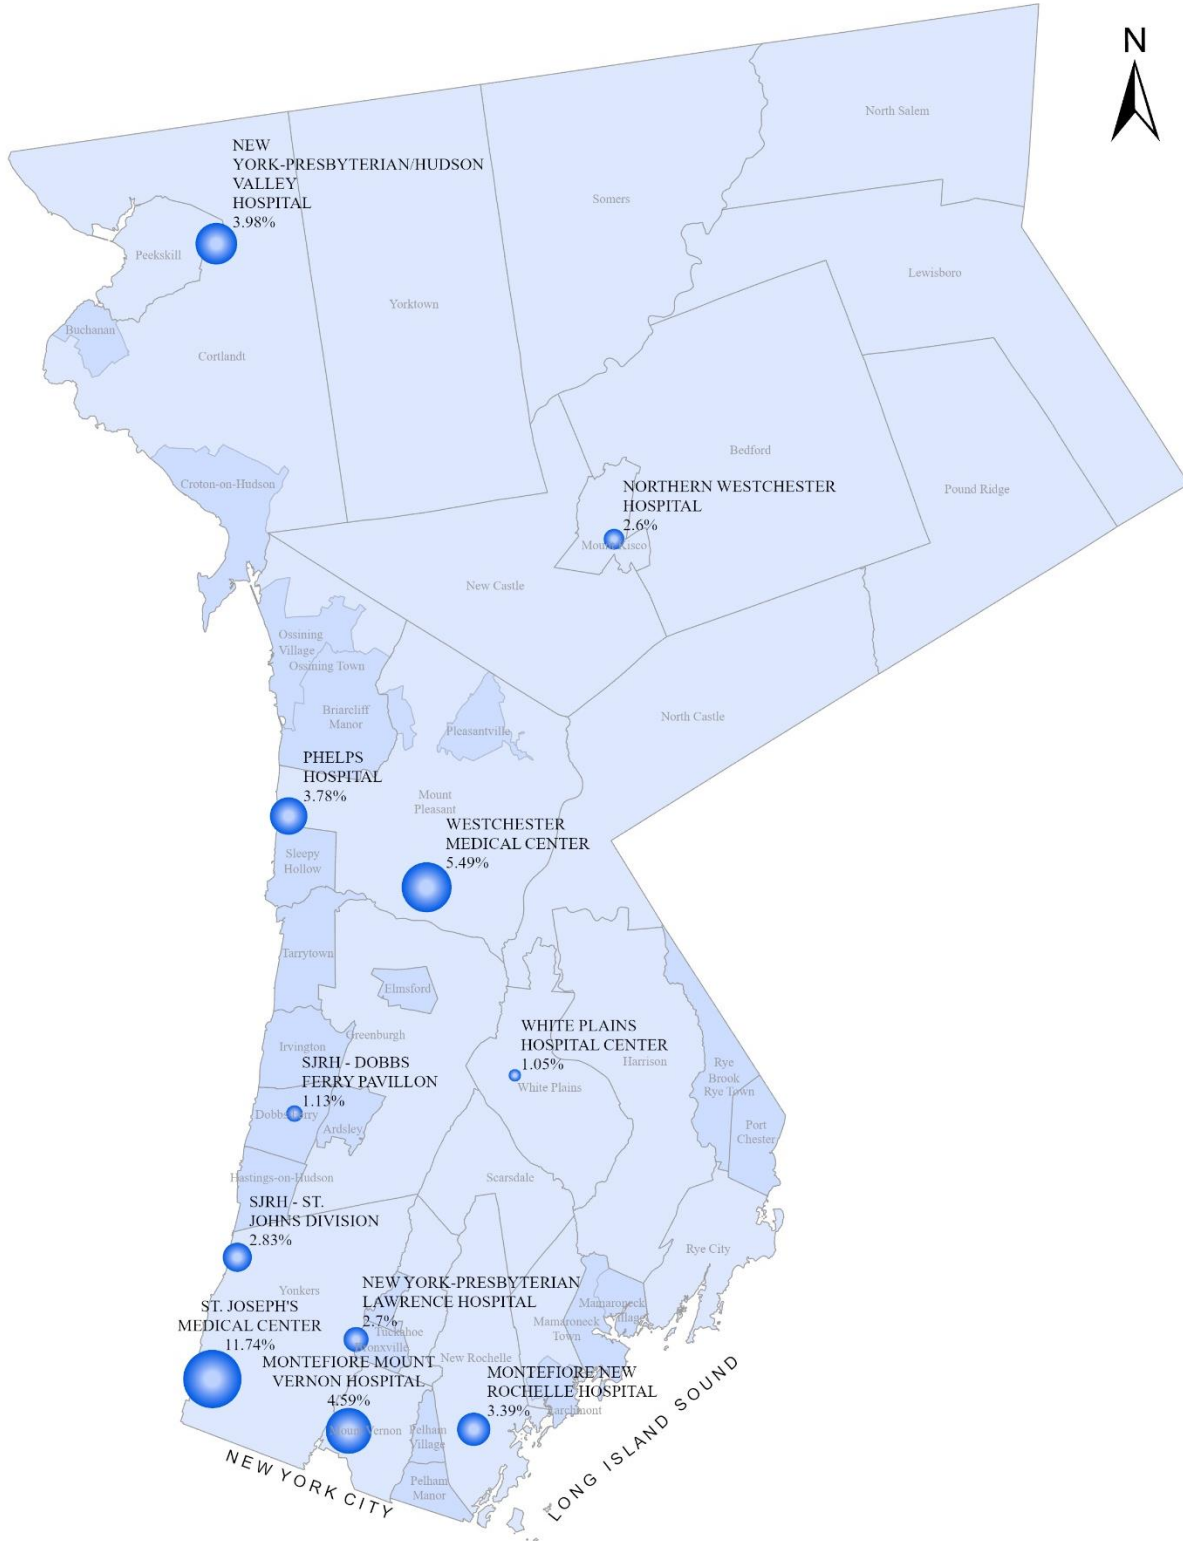

Hospital

All Encounters and SUD Encounters at Emergency Department by Hospital, Westchester County, 2023

Hospital

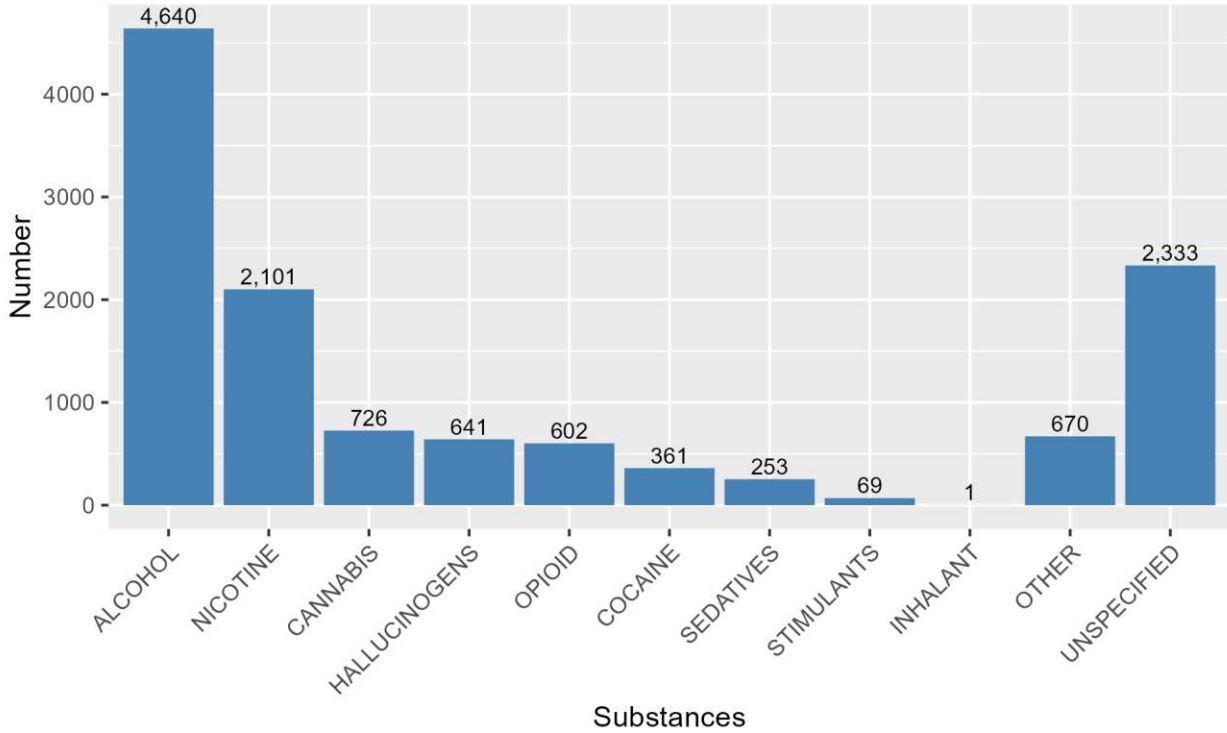

SUD Encounters as a Percentage of All Encounters at Emergency Department by Hospital, Westchester County, 2023

St. Joseph's Medical Center has the highest percentage of SUD encounters over all encounters during 2023.

SUBSTANCE

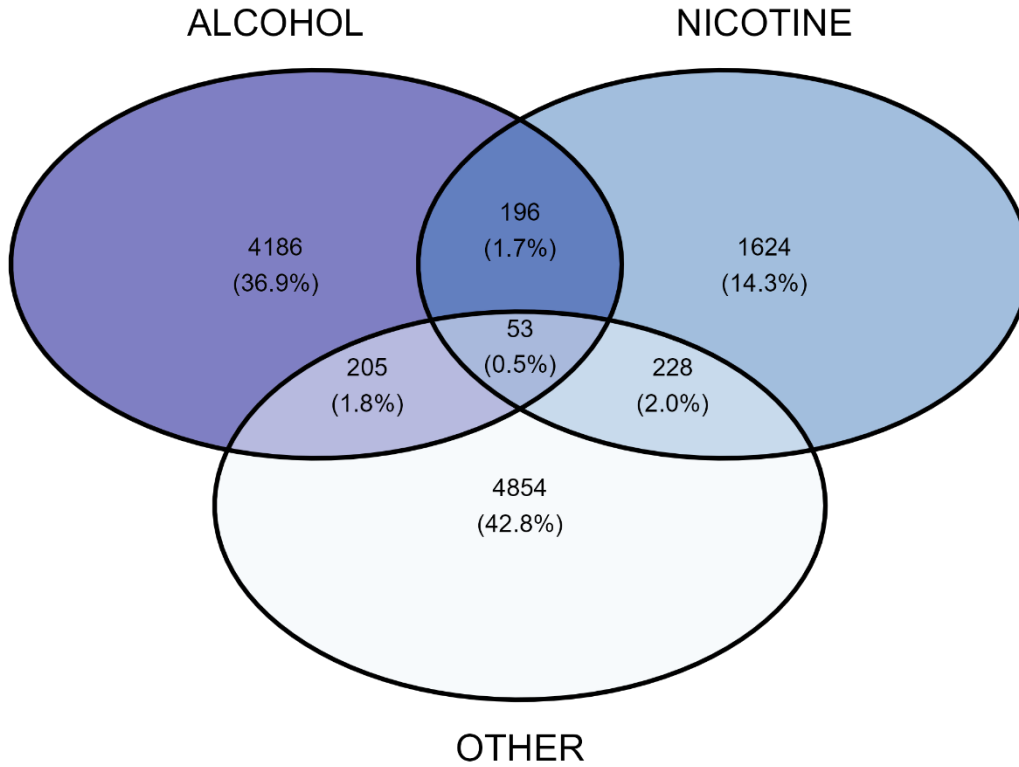

SUD Encounters by Substance Documented in the Diagnoses, Westchester County, 2023

Individuals may be using multiple substances at the time of their encounters at Emergency Department. Among them, alcohol and nicotine are the two most commonly reported substances.

SUBSTANCE

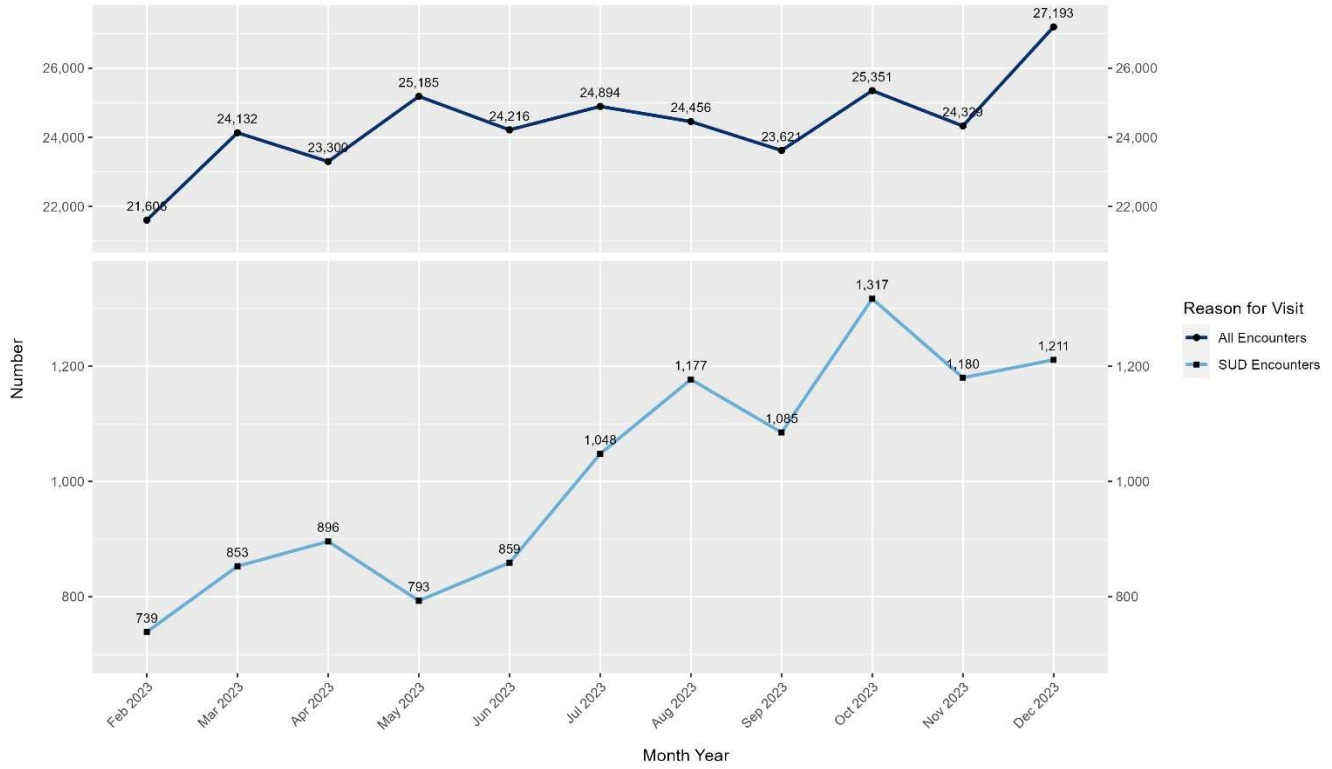

Overlapping SUD Substance, Westchester County, 2023

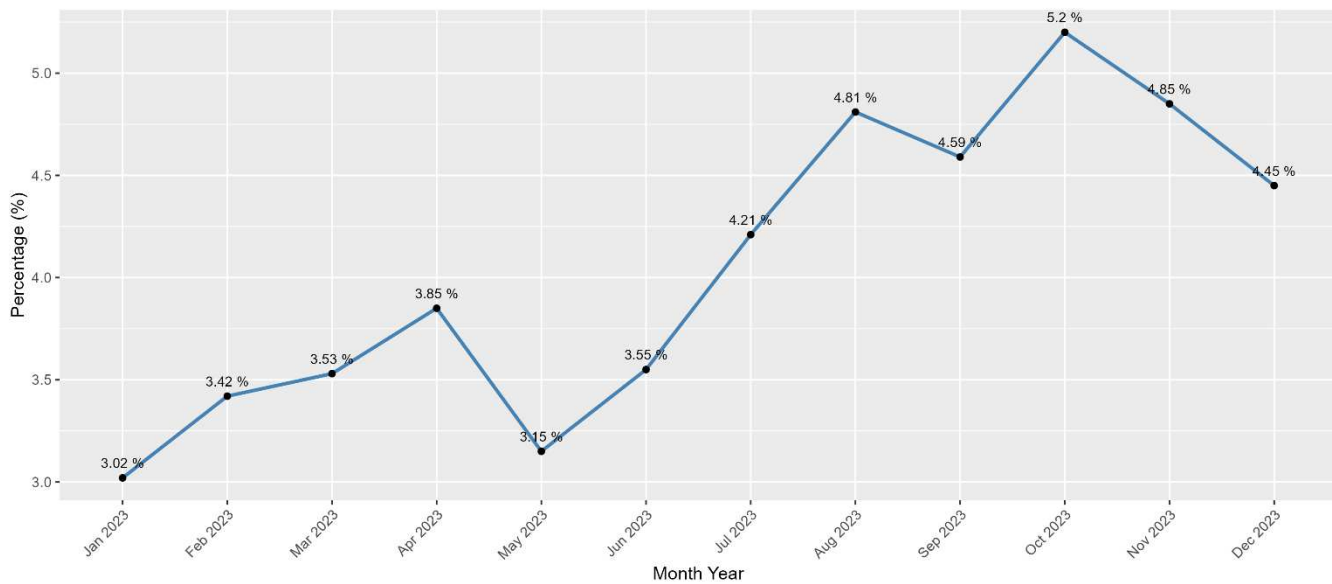

Substances included in OTHER	Encounters
